
QGEP Documentation

Release 0.5

The QGEP Project/OPENGIS.ch

January 26, 2016

1	Contents	3
1.1	QGEF User Guide	3
1.2	Indices and tables	7
2	Indices and tables	9

QGEP is a wastewater management module for QGIS based on SIA 405 (Leitungskataster) and VSA-DSS (GEP) and developed closely to the QGIS application.

This document can also be downloaded as a single PDF document: QGEP.pdf .

Contents

1.1 QGEP User Guide

This represents a guide on how to collect data in QGEP (digitizing), edit existing data and use various tools like length profile, network following and plan plotting.

1.1.1 Digitizing in QGEP

This represents a guide on how to correctly collect and digitize data of sewer networks including building the topology.

Data entry

There are basically two ways:

- Data entry by constructing or digitizing in the QGEP GIS itself
- Data entry in an external program or software and then importing the position and/or technical data into QGEP e.g.:
 - coordinates from manholes from measurement
 - position and/or technical data from another GIS or CAD system
 - using data from the surveyor (e.g. property boundaries) as a basis for defining catchment borders
 - other

Data entry in QGEP needs some understanding of the underlying data model VSA-DSS, but is supported with some great data collecting wizards and forms that link the different tables correctly together.

Digitizing Waste water structures

QGEP has a wizard to correctly collect manholes and special structures.

TO DO: Explain how it works

...

(take more from GEPView-Howto 1.2. Chapter 4.1)

Digitizing Waste channels

QGEP has a wizard to correctly build channels and connect them to the manholes / special structures and build up the topology for waste water nodes and reaches.

TO DO: Explain how it works
